

REPLACEMENT OF INVERTER TUBES

PURPOSE

1 Cases are continually being reported where inverters are returned to contractors requiring only tube replacement to make them serviceable.

2 Some inverters are in short supply and the practise of returning units requiring tubes aggravates this situation. Also the transportation costs to and from the contractor are considerably higher than the price of the tube.

PROCEDURE

3 Before returning an unserviceable inverter, units are to ensure faults attributed to other than tubes only are forwarded. Electrical shops are scaled with a tube checker and relevant AFEOs identify the tubes required.
