SECTION I
INTRODUCTION

1-1. This Parts Catalog lists, describes, and illustrates the components listed below which are employed in Type A, Aircraft Fire Detection

Systems manufactured by the Instrument Division, Thomas A. Edison, Incorporated, West Orange, N. J.

COMPONENT	STYLE	USAF TYPE	USAF SPEC	MFR'S MODEL NO.	MFR'S PART NO.	REMARKS
DETECTOR (THERMOCOUPLE)	CAGE	--	--	108-5	33786 series	Has two No. 6 terminals
		--	--	108-8	35155 series	Has No. 6 and No. 8 terminals
		F-1	41447	108-10	35534 series (35534-2 only)	Replaces No. 35155 and, with wiring terminal change. No. 33786
	PROBE	--	--	108-6	34606	Grounded
		F-2	45001	108-7	34606-2	Ungrounded
	1 CIRCUIT	A-1	45002	109-1	810911	Replaces 34606-2

	--	--	117-47	35213		

*Control Assemblies are called Relay Panels under Edison nomenclature.

1-2. Three basic models of cage-style fire detectors are listed. Each is available in five variations depending upon flange position. Functionally all are interchangeable. The Part No. 35534 series is of improved design to better withstand service conditions. It may readily be identified by its grey moulded insert; the older models which it supersedes, having black plastic inserts. Both Part No. 35534 and 35155 series are equipped with No. 8 negative and No. 6 positive terminal studs. In the Part No. 33786 series No. 6 studs are used for both terminals.

1-3. Three models of probe style fire detectors are listed. Part No. 34606 is grounded and must be used with, and only in systems employing, control assemblies designed for it. The improved model, Part No. 810911, supersedes Part No. 34606-2. Both are ungrounded and may be used interchangeably.

1-4. Control assemblies, also known as relay panels, are divided into major groups according to the number of detector circuits they are designed to serve. (Refer to table under paragraph 1-1.) Basically all control assemblies are similar in design and construction. However, within the group, models are distinguished by such details as circuit arrangement, type of shock-mounting, and specific parts used for each particular purpose. These differences may readily be noted by reference to the exploded views and application coding system employed in the Group Assembly Parts Lists.

1-5. Because the sensitive relay is a unit which is used in all control assemblies, it has been covered in a separate assembly parts list. Reference thereto is made in connection with the listing of the sensitive relay in each control assembly parts list.

1-6. Assemblies, sub-assemblies, and detail parts are listed in order of disassembly in the Group Assembly Parts Lists except that attaching parts follow immediately after the items to be attached and preceding any components of said items. Index numbers in these lists cross reference the nomenclature and the exploded views. In the Numerical Parts List items are tabulated in numerical order and cross referenced with the exploded views and Group Assembly Parts Lists by means of the figure and index numbers.

1-7. Part numbers have been assigned by the contractor to all except a few non-procurable parts which are included for reference. However, government standard parts and commercial furnished equipment has been listed by government and commercial manufacturer's part numbers respectively, with the contractor's drawing number shown parenthetically following the nomenclature in the Group Assembly Parts List. A code symbol from the list below is placed in parenthesis following the nomenclature of each item of commercial furnished equipment to designate the manufacture thereof.

1-8. The asterisk (*) preceding a part number indicates non-procurable parts. The double asterisk (**) preceding a part number indicates an alternate part. The triple asterisk (***) preceding a part number indicates an obsolete part which is therefore a non-procurable alternate for the current part. In order to avoid the necessity for stocking large numbers of special parts, standard parts are listed for such use even though the finish may vary from that of the corresponding part originally supplied by the manufacturer, providing such variation will not affect the operation or external appearance of the instrument. For bulk items, the letters "AR" are used in the quantity column to indicate "as required".

1-9. Major Assembly Application Coding Lists are included at the beginning of the listing of groups of major assemblies in the Group Assembly Parts Lists. By reference to these Coding Lists it is possible to determine in which model the part is used.

1-10. In order to identify a part, the following procedure may be used.

a. When part number is known, turn to the Numerical Parts List for figure and index number; then using the figure and index numbers in the first column of the Group Assembly Parts List, determine the nomenclature, and application.

b. When part number is unknown, refer to applicable exploded view as listed in Table of Contents and, after determining the index number of the part in question, using figure and index numbers in the first column of the Group Assembly Parts List, determine the nomenclature and application.

c. To determine the procurable assembly to requisition as a replacement when a part is listed in the Group Assembly Parts List as non-procurable, find the first procurable assembly applicable to that instrument above and in the column to the left of the part in question.
