## **FOREWORD**

EO 00-35-1 is the only authority for detailing shelf life of RCAF materiel. In the interests of economy only items that affect airworthiness, operational capability and safety considerations are selected for shelf life. Shelf life, regardless of method of pack will be prescribed in one column only. Where items are in other than preferred pack, packaging personnel will at their discretion as to priority, repack in accordance with current packaging instructions.

**PART 1****SHELF LIFE GENERAL****PURPOSE**

- 1 The purpose of this EO is:
- (a) To establish the allowable shelf life for the storage of specific serviceable materiel within the RCAF inventory and the action to be taken at the end of the prescribed shelf life.
- (b) To delegate the responsibilities for assigning a shelf life to specific items and the control of shelf lifed items.
- (c) To detail the procedure for the age control of specific items and ranges of items.

**INTRODUCTION**

2 It has been determined by research and from experience that the probability of certain aeronautical equipment functioning satisfactorily for a normal service life upon installation, decreases with the period of time it remains in storage prior to use. Hence, to reduce premature equipment failure caused by materiel deterioration, storage limitations are assigned to aeronautical equipment. These storage limitations have been selected and assigned in such a manner that the affected equipment is withdrawn from ready-for-issue supply prior to the time that materiel deterioration begins. Therefore, any equipment or materiel, which is issued and installed on aircraft or associated equipment prior to expiration of the assigned shelf life, should not fail because of materiel deterioration resulting from aging conditions.

- 3 This EO consists of the following parts:

- Part 1 - Shelf Life General  
 Part 2 - Aeronautical, Armament, Safety Equipment and Photographic Equipment  
 Part 3 - Instrument and Airborne Electronic Equipment  
 Part 4 - Ground Electronic Equipment  
 Part 5 - General Aircraft Hardware and Bulk Materials

**DEFINITIONS**

- 4 **CURE DATE** - is the date on which an article, normally rubber, was manufactured from the raw materiel.
- 5 **SHELF LIFE** - is the maximum time, stated in months, that a specified item shall remain in storage without an inspection, a functional test, repackaging or re-lifing prior to issue for installation. All of the following periods of inactivity are to be included in the shelf life:
- (a) Time on supply depot shelf.  
 (b) Time on shelf at unit.  
 (c) Time in transit.  
 (d) Time as part of built up assemblies awaiting installation or usage on an aircraft.

6 **SHELF LIFE EXPIRED (SLE)** - is the point at which the item has exceeded its allotted shelf life period as laid down in this EO.

7 **OPERATIONAL OR OVERHAUL LIFE** - is the maximum endurance life of an item after installation on an aircraft and is not to be confused with shelf life.

**GENERAL POLICY**

8 This EO is the authority for shelf life of RCAF materiel. In the interests of economy only those items that affect airworthiness, operational capability and safety considerations shall be selected for shelf life, and, within these limits, it is the aim of the RCAF to eliminate or extend the shelf life of all items listed in this EO.

9 All RCAF materiel not specifically mentioned in this EO shall have an unrestricted shelf life.

10 Shelf life tables shall list shelf life items individually by catalogue section and reference

number or NATO Stock Number, as applicable. Generic group by catalogue section may be used provided that there are no exceptions in the generic group.

11 The shelf life expiry date is calculated as follows:

- (a) Bulk rubber items - The shelf life expiry date equals the cure date plus the shelf life as detailed in this EO.
- (b) Components or accessories containing rubber - The shelf life expiry date equals the date of overhaul or the date of assembly plus the shelf life as detailed in this EO.
- (c) Explosive cartridges - The shelf life expiry date equals the date of filling with the explosive charge or the date of re-sealing in containers (whichever is applicable), plus the shelf life as detailed in this EO.
- (d) Photographic materials - The shelf expiry date equals the manufacturer's expiry date plus the shelf life as detailed in this EO.
- (e) All other items - Unless otherwise stated in this EO, the shelf life expiry date equals the date of acceptance by the RCAF from the manufacturer or overhaul contractor plus the shelf life as detailed in this EO.

12 In cases of shelf life materiel received from the USAF, the date shown on USAF forms AF50B and AF50C in the block "Date Inspection Required Prior to Issue" shall be accepted by the RCAF as the shelf life expiry dates.

13 All items specifically mentioned in this EO as having a shelf life and that have been salvaged and placed in storage shall be referred to AMCHQ for shelf life instructions.

14 Modification kits containing items subject to shelf life are not to be declared shelf life expired. Prior to installation, units are to check contents of the modification kits and when shelf life expired items are found they are to be replaced with serviceable items.

15 Contract issue spares and government supplied materiel are not subject to the age limitation prescribed in Proc 101-6. These items are RCAF property and are governed by the age limitations stipulated in this EO.

16 When RCAF material is supplied to contractors for installation in equipment produced under the requirements of Proc 101-6, a clause to that effect is to be included in the contract. If in satisfying such clauses the shelf life remaining on the materiel is insufficient to meet the requirements of Proc 101-6; the contractor is to request AMCHQ for concessions. The particulars of the specific concession must accompany the product to the consignee to assure acceptance.

## RESPONSIBILITIES

17 It is the responsibility of all RCAF personnel to ensure that only serviceable items are installed on aircraft and associated equipment. Personnel should continuously make systematic inspection of all items being received, issued and in storage to determine if rust, corrosion, fungus, loss or drying out of lubrication, obvious or suspected damage or other action has occurred or is about to occur which may render the materiel or equipment unfit for issue, shipment, continued storage or installation.

18 Field units, repair depots, supply depots and contractors shall submit routine UCR's whenever they have recommended changes to this EO.

19 AMCHQ is responsible as follows:

- (a) Each staff at AMCHQ is responsible for assigning shelf life to the items they manage.
- (b) To review the shelf life of equipment annually, bearing in mind the general policy outlined in paragraph 8, to ensure the shelf life tables listed herein are current.
- (c) To exercise extreme care in provisioning. Over provisioning on shelf life items results in expensive wastage.
- (d) To ensure periodic batch testing is carried out on equipment and components presently shelf life, the object being to eliminate or extend the shelf life as much as possible within the bounds of flight safety. Items which do not affect flight safety or operational efficiency should not be allotted a shelf life.
- (e) To issue instructions to supply depots

for all items on the CASR (Consolidated Assets Status Report) whose section and reference number are affixed with "T" in accordance with CAP 16 Vol 1 Chap 6.16. Instructions shall cover inspection, functional test, re-packaging or re-lifing prior to issue or disposal where economy dictates.

(f) To review all new equipment entering the RCAF inventory for shelf life applicability.

20 Materiel inspection sections at supply depots are to determine (in addition to duties and responsibilities prescribed in other regulations); the condition and status of all materiel, being received, in storage, and being issued by:

(a) Maintaining a constant surveillance over serviceable RCAF materiel. As part of this surveillance, materiel inspection sections are to determine if the necessity exists for inspection, re-inspection, preservation and repackaging.

(b) Making regular inspections of materiel and equipment being received and in storage to determine whether or not the necessity exists for maintenance action prior to storage, issue, shipment or continued storage.

(c) Making regular examinations of humidity indicators in desiccant packaged items to ensure that the moisture content of such packages does not exceed the allowable limits.

(d) Making a periodic review of the BF register when materiel is received at the supply depot, the re-inspection date is to be controlled by means of the BF register. The re-inspection date is to be determined by referring to the shelf life tables as contained in this EO.

21 All serviceable materiel at SD's shall be stored in, so far as possible, such a

manner as to facilitate issue of the oldest item first as determined by the cure date or date of acceptance by the RCAF, excepting as indicated below:

(a) Items with less than one month shelf life remaining, shall not be issued to units for stock.

(b) Issues for stock at overseas bases and isolated units shall be governed by the following:

If the Established Shelf Life is	Do Not Ship if Less Than The Following Shelf Life Remains
-------------------------------------	---

12 to 18 months	6 months
18 to 36 months	12 months
36 months or longer	15 months

(c) Urgent demands for immediate use may be satisfied with materiel which has not reached its shelf life expiry date.

22 To ensure that materiel having a restricted life is recategorized to shelf life expired (SLE), at termination of shelf life, the Materiel inspection section at SD's will maintain a BF system and will action materiel in accordance with CAP 16, Vol 1, Chap 6.16. Shelf life expired materiel will be issued only on authority from AMCHQ who will direct consignees to carry out a visual and/or functional check on receipt of such materiel.

23 Units are to maintain a BF register on all shelf lived items. Items reaching shelf life time expiry shall not be issued without AMCHQ authority. Disposal, relifing or re-inspection shall be accomplished in accordance with the shelf life tables herein.

## PART 3

# INSTRUMENT AND AIRBORNE ELECTRONIC EQUIPMENT DRY BATTERIES

## GENERAL

1 For the purposes of this EO, "dry cells" will be considered as "dry batteries". The following types of dry batteries are normally procured to Specification JCNAAF-B-2, which requires the date of manufacture to be marked on the battery:

- (a) Carbon-zinc: Types BA1 to BA999.
- (b) Mercury: Types BA1000 to BA1999.
- (c) Month of Manufacture - On dry batteries manufactured to JCNAAF-B-2, the month and year of manufacture are stamped on after the BA type, as follows: i.e., BA-30, Mfd. 0964 indicating, this battery was manufactured in September 1964.

## STORAGE

2 Dry batteries can be considered as a PERISHABLE COMMODITY, ESPECIALLY the carbon-zinc type, which deteriorates at the rate of approximately 25% per annum under normal storage at 70 °F, and they must be issued on a "first in, first out" basis. The shelf-life of dry batteries is considerably increased when the dry batteries are stored at low temperatures, and the Canadian Army for instance, is resorting to refrigerated storage so as to prolong the shelf-life of their dry batteries. Exceptionally, the RCAF may obtain a quantity of dry batteries from the Canadian Army refrigerated storage (such as 25 COD Montreal, 12 ROD Halifax, etc.).

## INSPECTION

3 BA batteries (in normal storage at 70 °F). The shelf-life listed in this EO applies only to BA type dry batteries procured to Specification JCNAAF-B-2. This shelf-life is to be calculated from the time of manufacture which is marked on each battery.

4 Commercial dry batteries procured by LPO which have an expiry date stamped on them by the manufacturer, are to be governed by that expiry date.

5 Commercial dry batteries procured by LPO which do not have an expiry date stamped on them by the manufacturer can be controlled by the Supply Depot, provided the batteries are procured fresh, by using the date of receipt of shipment as a reference. The best practices to follow however, in the case of locally procured commercial equivalents of BA dry batteries, are as follows:

- (a) Purchase fresh batteries only.
- (b) Purchase directly from the manufacturer.
- (c) Procure small quantities only for immediate requirements.
- (d) Issue quickly.

6 BA type dry batteries which the RCAF may occasionally obtain from Army refrigerated storage are to have a remaining shelf-life applied to the shipment, based on the following formula:

$$\text{Remaining shelf-life} = b - \frac{(a \ b)}{100}$$

where a = months in refrigerated storage (i.e. from month of mfr stamped on battery to the month of the voucher covering issue Army COD or ROD to the RCAF).

b = normal shelf-life listed for the type in this EO.

7 For example, if a dry battery having a 12 month shelf-life in this EO, has been in refrigerated storage for 20 months prior to issue to RCAF, its shelf-life in months (starting from month of Army issue voucher, and rounded out to nearest whole number) becomes:

$$\begin{aligned} 12 - \frac{(20 \times 12)}{100} &= 12 - \frac{240}{100} \\ &= 12 - 2.4 \\ &= 9.6 \text{ months} \\ &= 10 \text{ months} \end{aligned}$$

\* Shelf life allotted pending receipt of information on compound and/or application.

NOTE

For all Sections of 32 and 33 in the supply catalogue, SDs shall report time-expired equipment to AMCHQ on a pro forma similar to Appendix "B", CAP 16, Vol 1, Section 13.1, prepared in two copies. Time-expired material reported to AMCHQ shall be frozen in stock until such time as disposal instructions are received from AMCHQ.

CAP 10 Section	Item Nomenclature	Shelf Life (Months)	Disposition When Shelf Life Expired
32B	Cordage, Textiles and leather	48	Re-examine. Pending satisfactory visual inspection 75% extension.
32C	Hose, Aircraft Rubber	48	
	Cord, Absorber and Elastic Ref. 1, 3, 4, 5, 6	48	Re-examine per EO 110-15-1

NOTE

For markings and age control refer to EO 110-10-10 and PROC 101-6.

33A	Paints, Varnishes and related Materials all stocked items.	60	Re-examine. Pending satisfactory visual inspection 50% extension.
-----	--	----	---

NOTE

When the shelf life of surface coatings has expired a visual check is to be made and the materials inspected for loss of solvent, formation of hard cake, decomposition, gas formation, permanent separation of components of water-base and rubber-base paints etc. Where the serviceability is doubtful a full report of the conditions found is to be submitted to AMCHQ and further instructions will be given. In most cases paint products can be adjusted in the field and converted into usable products.

Manufacturer's "Expiry Date" marked on the materials is to be disregarded.

33G	Adhesives, Adhesive Tapes and Transfers. All items listed as stocked in the supply catalogue.	24	Re-examine. Pending satisfactory inspection 50% extension.
	All items listed as "LP" in the supply catalogue.	4	Re-examine. Pending satisfactory inspection 100% extension.

NOTE

Manufacturer's "Expiry Date" marked on the materials to be disregarded.
