SECTION I INTRODUCTION

1. GENERAL.

This catalog lists and describes the parts for Wasp Junior Models R-985-AN-1, -3, -4, -6, -6B, -10, 12, 12B, -14B, B3, B4 & B5 Engines manufactured by Pratt and Whitney Aircraft, Division of United Aircraft Corporation, East Hartford, Connecticut, 06108, U.S.A.

The Spare Parts are manufactured by United Aircraft of Canada Limited, P.O. Box 10, Longueuil, Quebec, Canada.

This Catalog is divided into four sections as shown in the Table of Contents.

2. TABLE OF CONTENTS.

The Table of Contents at the front of the catalog shows the method of grouping the parts and the sequence of the groups.

3. GROUP ASSEMBLY PARTS LIST.

The Group Assembly Parts List (Section II) consists of the complete engine divided into 21 main groups as shown in the Table of Contents. Each assembly listed is followed immediately by its component parts properly indented, thereunder, to show their relationship to the assembly. Component parts of the complete engine, which are not included in any assembly, but which are used in conjunction with, or attached to a certain assembly, are listed either preceding the first detail or following the last detail of that assembly, and in line with the major assembly.

4. UNITS PER ASSY.

The quantities listed in the "Units per Assy." column of the Group Assembly Parts List are, in the case of assemblies, the total quantity used per engine at the location indicated; while the quantity of each component part indented under the assemblies is the quantity used per assembly. The quantities specified, therefore, are not necessarily the total used per engine. Refer to the Numerical Parts List (Section IV) for the total quantities used per engine.

5. DIMENSIONS.

All dimensions shown herein are nominal. They are inserted to facilitate identification for ordering and are not to be construed as restrictive in inspection.

6. SUPERSEDES AND REPLACES.

The word "Supersedes" indicates that the old and the new parts are interchangeable. The word "Replaces" indicates that the old and new parts are not interchangeable. The disposition of parts subject to the terms "Supersedes" and "Replaces" as identified in this catalog shall further be governed by any applicable specific instructions such as Service Bulletins and Spare Parts Digests.

7. ILLUSTRATIONS.

The illustrations in this catalog are intended only to facilitate the identification of parts. These illustrations shall not be used as a parts assembly guide.

8. REPLACEMENT STUDS.

Where oversize studs (e.g., .004 inch OS) are listed in the Group Assembly or Alphabetical Parts List Sections, they are used as the first replacement of the standard size studs originally installed in the engine.

9. DIRECTIONAL REFERENCES.

The terms "front" and "rear" are determined by considering the propeller end of the engine as the front and the anti-propeller end as the rear.

The terms "right" and "left" in connection with parts listed in this catalog are from the viewpoint of the rear of the engine.

10. CYLINDER NUMBERS.

Viewing the engine from the rear, cylinders are numbered consecutively in a clockwise direction around the engine starting with number one cylinder, which is the top cylinder.

11. ABBREVIATIONS.

The abbreviations used throughout this catalog are as follows:

<i>Abbreviation</i>	<i>Full Name</i>

12. SYMBOLS.

The symbols used throughout this catalog and their explanations are as follows:

- * Indicates a part not to be stocked or requisitioned as a detail part.
- † Indicates a part available in oversize and/or undersize.

13. HOW TO ORDER PARTS.

Please direct parts orders to United Aircraft of Canada Limited Spare Parts Department and include the following information:

- (a) Each individual part number should be assigned one item number on the purchase order.
- (b) Pratt and Whitney Aircraft Engine part number. If part number is not available, give complete description, dimensions, location in engine; also type, model and manufacturer's serial number of engine, which is obtainable from the engine data plate. (See paragraph 14.) If the part is a product of another manufacturer used on Pratt and Whitney Aircraft Engines and such manufacturer's part number is used, please mention the manufacturer's name and the number and/or designation of the complete assembly unit for which the part is intended.

- (c) The part name appearing on an order should consist only of the portion preceding the dash. The description matter following the dash is for identification purposes only and will be omitted in the setting up of sales orders.
- (d) Indicate Quantity of each item required.
- (e) Complete shipping instructions must be given, including:
 1. Complete destination address.
 2. Method of shipment.
 3. Required shipping schedule.
 4. Any other special instructions, viz., markings, etc.

It is suggested that the intended receiver of a shipment, if other than the original source of the order, be notified that an order has been placed so that such intended receiver may be clerically and financially prepared to accept delivery.

14. ENGINE DATA PLATE.

An engine data plate is mounted on each engine, usually on the nose section, and contains statistical data and information pertinent to that engine. Please order replacement data plates from United Aircraft of Canada Limited Service Department stating all of the information appearing on the original data plate.

15. RETURN OF PARTS.

Proper authority for the return of new parts to the factory must be obtained from United Aircraft of Canada Limited before their actual return, otherwise responsibility cannot be assumed by United Aircraft of Canada Limited.

Please return used parts to United Aircraft of Canada Limited Service Department.

Parts returned for repair shall be directed to United Aircraft of Canada Limited Power Plant Overhaul Sales Department.

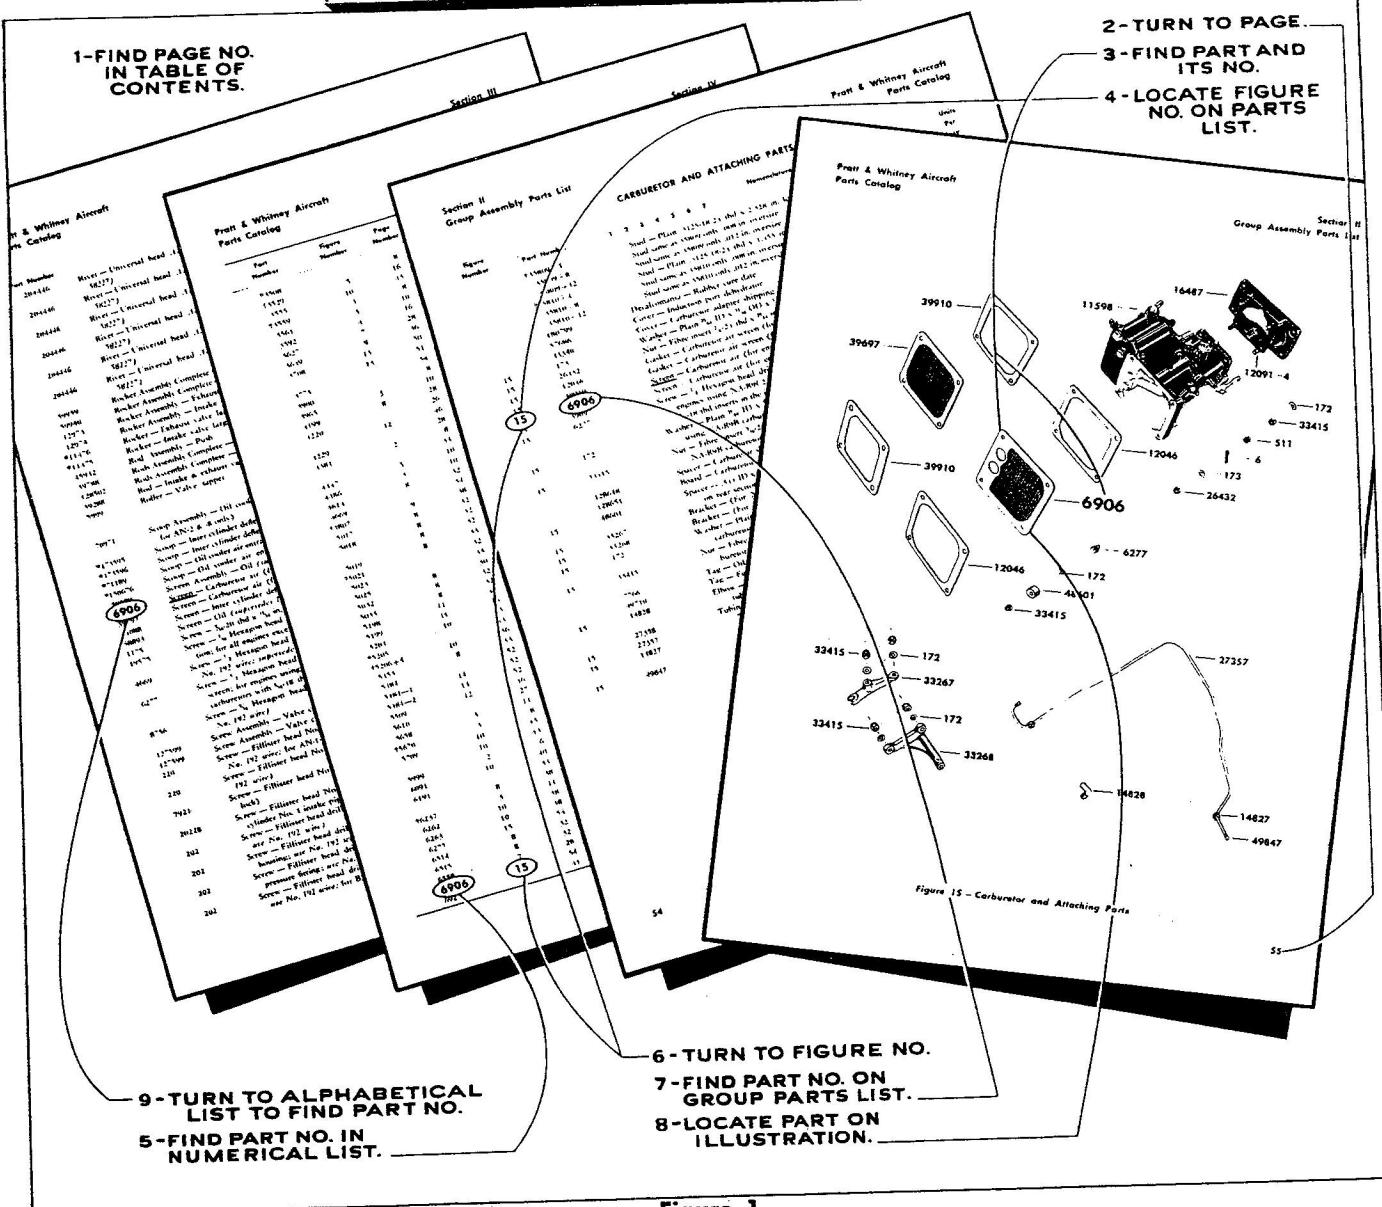

When requesting authority for the return of any parts to the factory, the following information must be included:

1. Reason for returning parts.
2. Engine type, model and serial number from which parts were taken.
3. Total number of hours of service of the part and of the engine, and number of hours since last overhaul.
4. Part number and part name.
5. When possible, the order number and date under which the part or parts were originally purchased.

16. ACCESSORIES.

The accessories used on Pratt and Whitney engines are guaranteed and serviced by the respective manufacturers. Lists are furnished by the respective manufacturers and Pratt and Whitney Aircraft does not assume the responsibility for changes in parts or in prices.

**INSTRUCTIONS
FOR USE OF PARTS CATALOG**

To secure part number when name and location in engine is known or to secure the part name and number where only the appearance of part and location is known:

- (1) Refer to Table of Contents to find page number on which the Major Assembly or system containing the part is shown.
- (2) Turn to the page where the Major Assembly is shown.
- (3) Find part and its part number on illustration.
- (4) Locate part number on Group Assembly Parts List page which will show part name.

To locate part name and location in engine when only part number is known:

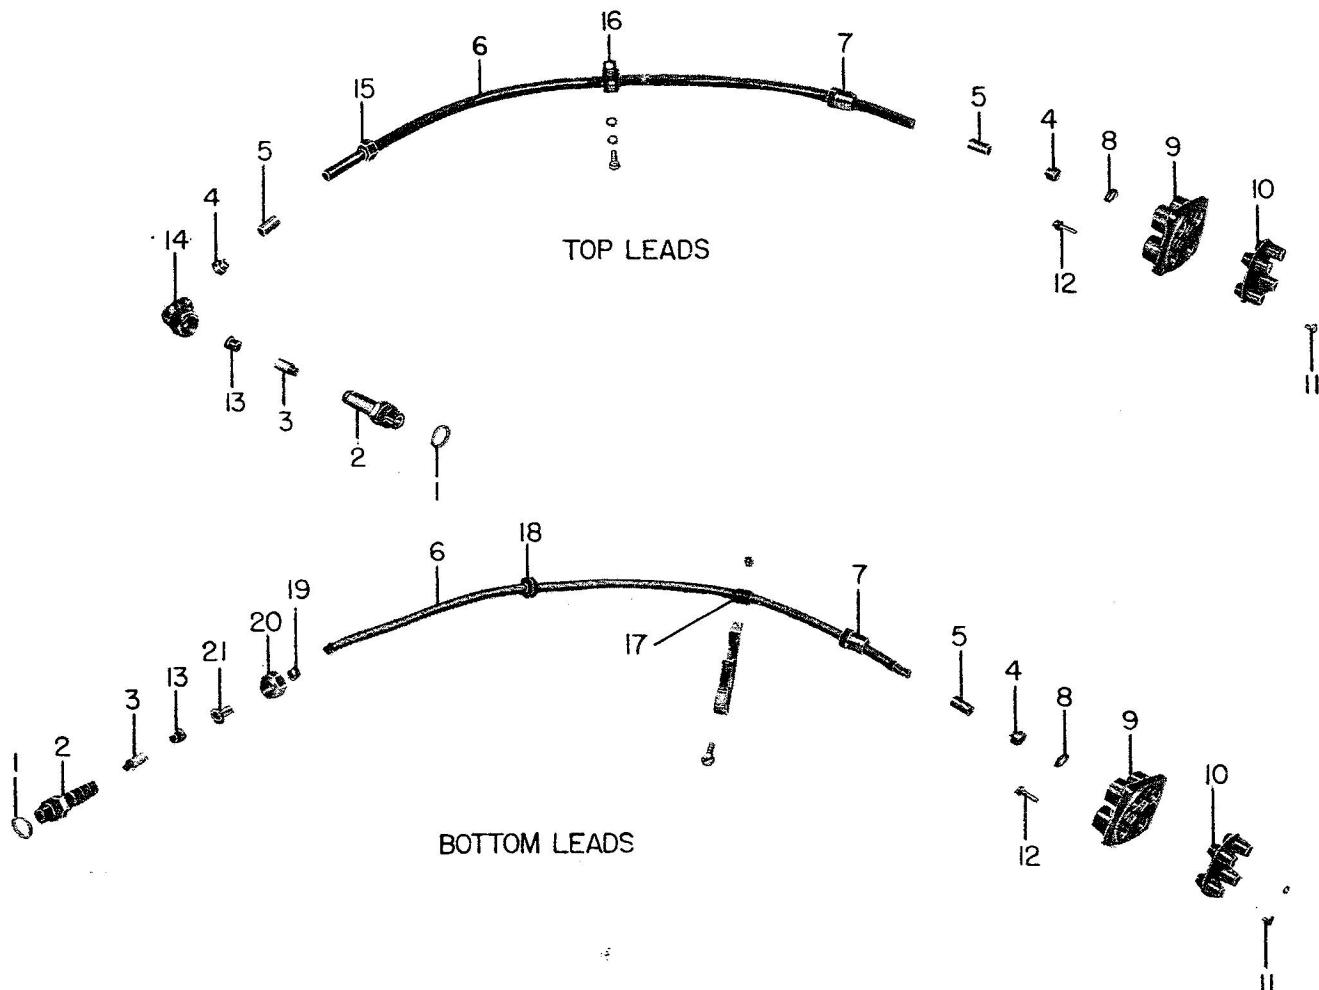

- (5) Refer to Numerical Parts List to find part number.
- (6) Turn to page number in Group Assembly Parts List shown on Numerical Parts List for that part.
- (7) Find part number on Group Assembly Parts List page. This will show part name and figure number on which part is illustrated.
- (8) The illustration will show the location of that part on the engine.
- (9) Refer to Alphabetical Parts List to find part number.
- (6) Turn to page number in Group Assembly Parts List shown on Alphabetical Parts List for that part.
- (7) Find part number on Group Assembly Parts List page. This will show figure number on which part is illustrated.
- (8) The illustration will show location of that part on the engine.

SECTION IV IGNITION SYSTEM

NOTE

All references to location of magnetos, ignition harness connections, etc., will be as the engine is viewed from the rear, mounted in a horizontal position on the overhaul stand.

4-1. GENERAL. All subject engines are equipped with a high tension ignition system. Dual ignition is furnished by two Scintilla S-N series magnetos. Consult Table IV-I for proper model application. The ignition wiring is so arranged that the left magneto fires the top plugs on the left bank and the bottom plugs on the right bank. The right magneto fires the top plugs on the right bank and the bottom plugs on the left bank.

4-2. IMPULSE COUPLING MAGNETO (S4LN-21, S6RN-21). The purpose of the impulse coupling is: (1) To spin magnet (between impulse trips) faster than engine cranking speed, thus generating a better spark for starting; (2) automatically retard spark when starting engine. When engine is running, the impulse coupling acts as a drive coupling for the magneto. The impulse coupling magneto is always installed on the left side of the engine.

4-3. RETARD BREAKER MAGNETO. The retard breaker magneto incorporates two sets of breaker points and provides a fixed retard and long duration boosted spark for easier starting. A source of DC power and a starting vibrator are required to complete the installation and it is recommended that the magneto manufacturer be contacted for information on the various vibrators and switching arrangements available. Both the -200 and -1200 series magnetos incorporate an integral feed-thru capacitor and require no external noise filter in the magneto ground lead. The retard breaker magneto is installed on the left side of the engine.

4-4. ENGINE FIRING ORDER. The engine firing order for four cylinder engines is 1-3-2-4 and for six cylinder engines is 1-4-5-2-3-6.

4-5. IGNITION HARNESSSES. Ignition harnesses vary with the engine models; however, for purposes of description, all harnesses are comprised of the same basic components. The number of leads in the harness is, of course, determined by the number of cylinders in the engine. Basically, each lead is comprised of a magneto terminal end assembly, the ignition wire, and a 70° or 110° spark plug elbow assembly. Various types of wire are used, the latest being the braided metallic shielding type with the blown rubber tubing for an outer cover. For wire lengths and installation instructions, see Service Instruction No. 1119. For model application consult Table IV-I.

4-6. SPARK PLUGS. For information relative to approved spark plugs for the subject engines consult the latest revision of Service Instruction No. 1042.
