TECHNICAL INSTRUCTIONS

EXPEDITOR AIRCRAFT

LANDING GEAR OVERLOAD

CLUTCH - TESTING

TCTI D4/3
1 Jan 59

- 1 EO 05-45B-7A Section 1 Item CO403 calls for a check to be made of the overload clutch adjustment, and refers to EO 05-45B-2 part 2 section 8 for details. Para 16 of section 8 states the clutch will be checked by means of a spring scale and adjusted (if necessary) until the clutch slips at a reading of 130 plus or minus 10 pounds.
- 2 As a spring scale capable of carrying out this check has never been catalogued, the manner in which units have been carrying out this requirement is not known. AMC is aware of this deficiency and procurement action is being taken and when available, item will be scaled in CAP 670 Part 6.
- 3 Pending availability of spring scale units are to endeavour to carry out inspection requirements of item CO403 using any procedure or material which can be adapted to meet the requirement.
- 4 This TCTI replaces TCHQ message AE556 dated 22 May 1958.
- 5 A copy of this TCHQ is to be inserted in front of EO 05-45B-2 in the appropriate EO binder.
